

# TINA on-Premise

## Key Points

- Dedicated Cloud Platform.
- Overflow to services public Cloud.
- Site selection of implantation.
- Scalability of Cloud resources.
- 24x7 support and maintenance.
- Mastery of governance.
- ISO 27001:2013 certified.
- API compatible with market standards.
- Data availability, flexibility and security.

## TINA ON-PREMISE - TURNKEY CLOUD APPLIANCE

OUTSCALE has developed an on-Premise Cloud: TINA on-Premise, to meet your Cloud strategy with unified management. Your services will be deployed where you want according to your policy and the criticality of the service and the data.

TINA on-Premise is the first turnkey cloud technology appliance.

## CLOUD RESOURCE ORCHESTRATION

TINA OS, the OUTSCALE Cloud orchestrator tool, allows you to control your Cloud infrastructures in complete freedom, via its API or any tool compatible with market standards. TINA OS provides you with any type of cloud resources you need: virtual machines, network, storage and security.

TINA OS

You also benefit from existing machine images or you create new ones according to your needs, configure your virtual networks and their routing, and benefit from strong scalability of storage volumes.

## DATA GOVERNANCE

TINA OS gives you the possibility to manage physical and logical zones in order to allow you the governance of your data.

One of the main advantages of our orchestrator is to allow you to create copies (snapshots) of your environments instantly, and therefore to benefit from better management of your backups. Through TINA OS, you also have a fully secure object storage platform.

The creation of a standard environment model (Image Cloud) simplifies the management of the life cycles of your Cloud resources.

## COMMITMENTS & SAFETY

The security of our Cloud is our priority. At OUTSCALE, we put in place the best systems to guarantee the highest levels of security in accordance with the most demanding standards on the market, on all of our services.

From TINA OS, you can configure your secure and encrypted links, as well as all the management of identities and access to your resources on the OUTSCALE Cloud in complete safety. In hybridization, you have the possibility of interconnecting your Datacenters with those of OUTSCALE thanks to a dedicated physical link. All the logs are centralized and made available to you.

## CAPACITY OPERATION AND MANAGEMENT

The dozen annual updates provide performance improvements, added features and bug fixes. We also manage the lifecycle of reference cloud images with ongoing updates. You have the option of adding to your monitoring system the indicators provided by our operating tools.

Our support and our training in the management of the solution will allow you to ensure better use of your platform while guaranteeing you good capacity management.

## About OUTSCALE

- Founded 2010.
- Subsidiary of Dassault Systèmes.
- Global Cloud Network: America, Europe and Asia.
- Innovation: 15% of income invested in innovation.
- R&D 30% of staff dedicated to Research and Development.
- Certifications: ISO 27001-2013, CMSP Advanced par Cisco System, Intel Cloud Technology, AltaVault par NetApp.
- RGPD: In accordance with the General Data Protection Regulation.
- Strategic partners: Cisco, Intel, Nvidia, NetApp and MapR.

## 24x7 PREMIUM SERVICE & SUPPORT

Because at OUTSCALE, the proximity and satisfaction of our customers are at the heart of our concerns, we support you throughout the implementation of your projects. We help you set up the Cloud architectures best suited to your needs and train you in the use of our solutions: monitoring, advice, feedback.

OUTSCALE provides level 1, 2 and 3 support on its solutions 24/7, in French and English.

## BUSINESS BENEFITS

Infrastructure is no longer an obstacle to the deployment of new solutions. By using the hybridization of "TINA on-Premise" as well as the OUTSCALE Public Cloud, you benefit from significant agility and a better return on investment (ROI).

## TINA ON-PREMISE INTEGRATION

You can acquire a TINA on-premise through an OUTSCALE-certified Managed Services Provider (MSP) or through the partner of your choice. The MSP will accompany you during the installation as well as during the operation phase of the equipment. Also, the partner will assist you in the deployment of your Cloud strategy with the creation of new on-demand services for your users.

## FAQ

### Can I decouple the purchase of the TINA OS Orchestrator from the appliance?

We offer a turnkey cloud appliance with a set of specific and certified hardware: software and services. It would also be possible to use TINA OS on an existing infrastructure subject to validation of the infrastructure by OUTSCALE to verify its compatibility and guarantee the best levels of performance.

### What if I don't want to renew the "Services" part?

The end of the Service contract is synonymous with the end of the support and updates provided. However, the service will continue to operate in the last maintained state.

### Do you have financing solutions for your product?

We have several financing solutions: leasing or on demand.

### I use the public cloud, will I find all the features in my on-premise cloud?

Yes, the version of TINA OS assures you the same functionalities available on the public Cloud on your Cloud on-Premise.

### Can I purchase the desired TINA on-Premise configuration (amounts of compute resources, storage, etc.)?

Yes, our on-Premise Cloud is flexible according to your needs, we will help you define the configuration and architecture that best meet your challenges and needs.

### Is there a limit in the number of virtual machines made available?

The only limit is that of the physical configuration and the target performance. TINA OS allows infinite resource scalability.
